

COSHH Policy Statement

Control of Substances Hazardous to Health

Hazardous substances are not used regularly onsite by Eliquo Hydrok when installing our products and we do not usually supply substances categorized as hazardous, when others install our screens.

An assessment of the likely health and safety implications of using substances which may be categorised as hazardous is made at the initial stages of the contract and where possible the likelihood of risk is either eliminated or reduced to an acceptable level.

Any deviation from this policy will be notified on an individual contract basis and a copy of the measures we will undertake to control any substance hazardous to health will be provided at that time to the main contractor.

Signed: 

Dave Armstrong, Managing Director
